
SMARTCUBE

"Your Personalized TV Experience"

Problem

Most people are **unsatisfied** with their **TV recommendations** ...

... because **only** their **viewing history** and **ratings** are considered

... **but not** their current **mood** or **social interactions**

Solution

SMARTCUBE: Define your current TV mood and get better personalized recommendations

Save Time

Spare your Nerves

Enjoy more

Product Use Case

Product Technology

User

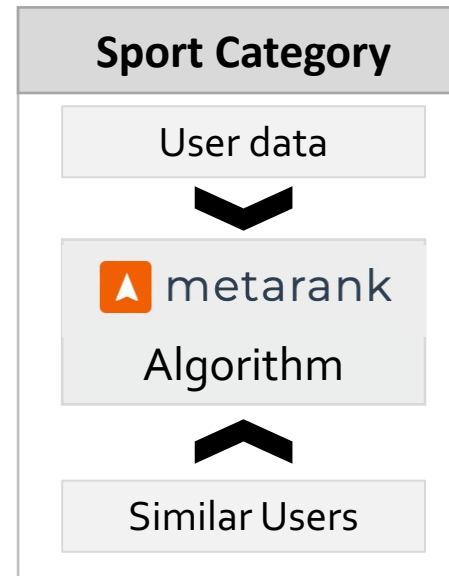

User chooses category by turning Cube

SMARTCUBE

Cube identifies which category was selected and sends signal to recommendation engine

ML Algorithm

ML algorithm takes User data (e.g. favorite sports club) and similar users into account

Recommendation

Algorithm generates priority list of recommendations

Market Validation

64%

of people use
personalized TV
recommendation
engines

79%

of them are
unsatisfied with
their TV recom-
mendations¹

67%

would use a mood
depicting device to
improve the
recommendations

Note: Data based on survey conducted at Start Summit (n=33)

1: Rated the recommendations with 3 or less out of 5

Outlook potential

As soon as the customer is locked in, the potential of the **SMARTCUBE** is limitless:

From TV recommendations...

... over social interaction ...

.. to a smart home device

Recommendation Demo

Hello...

Based on your choice of **Talkshow** we recommend
5 Fragen - Die ich stelle.

 shows you recommendations for <input type="text" value="Kids"/>	 shows you recommendations for <input type="text" value="Magazin"/>	 shows you recommendations for <input type="text" value="Science Fiction"/>
 shows you recommendations for <input type="text" value="Talkshow"/>	 shows you recommendations for <input type="text" value="News"/>	 shows you recommendations for <input type="text" value="Adventure"/>

Recommendation engine

- Our engine is based on the open-source platform from Metarank
- Metarank is a pre-trained recommendation engine which can be accessed in real-time to personalize the listings
- Integration: Define features with simple YAML configuration file and send historical events and metadata via a JSON API
- Demo: <https://demo.metarank.ai>
- Description: <https://github.com/metarank/metarank>
